SUBJECT INDEX (Vo. 53)

Adaptive control
  laws, modification using adaptive gain feedback, 145
  output predictive, of a single-link flexible arm, 311
  robust, of plants with unknown order and high frequency gain, 559
  scheme, hybrid, stable, asymptotic properties, 1377
  stable, for not-necessarily stable discrete linear plants with bounded non-linear inputs, 335
Adaptive controller for wing flutter with unmeasurable excitations and unmodelled dynamics, 293
Adaptive input–output linearization of non-linear systems, 193
Adaptive modal parameters identification for collocated position feedback vibration control, 597
Algorithm
  causal eigenvector function approximations and the problem of scaling, 509
  for eigenstructure assignment by output feedback, 1413
  for MRAC design, 1327
  for recursive identification, continuous systems, using adaptive procedure, 391
  model order reduction via real Schur-form decomposition, 709
  sequential quadratic programming type, for discrete optimal control problems with control inequality constraints, 823
  simple pivoting type, root-locus method for linear systems with delay, 951
  simultaneous stabilization of single-input systems via dynamic feedback, 1497
  stochastic continuous-time models computation from ARMA models, 1311
Arm, flexible, single-link, output predictive adaptive control, 311

Bias-compensating least squares method for identification of continuous-time systems from sampled data, 445
Bilinear system predictive controller design, 97
Boundary value models, efficient smoothing, 503

Closed-form determination of gramians of stable time-invariant linear system, 1483
Computation of the inverse of a polynomial matrix and evaluation of its Laurent expansion, 431
Computer-aided-design tool for simplification of robut dynamic model based on manipulator system performance, 1205
Computing stochastic continuous-time models from ARMA models, 1311
Confinement and stabilization for non-linear continuous-time systems, state feedback, 799
Continuous-time GMV control problem, polynomial solution, 641
Continuous-time non-linear systems, discrete-time control, 113
Continuous-time stable systems, H^∞ identification using generalized Laguerre series methods, 689
Continuous-time systems, identification from sampled data, bias-compensating least-squares method, 445
Controllability analysis of linear systems via orthogonal functions, 1491
Controller
  adaptive, for wing flutter with unmeasurable excitations and unmodelled dynamics, 293
  design, for Van der Pol oscillator, equilibrium surface modelling, 1055
  multirate output type, practical issues, 1005
  PID type, optimal, auto-tuning, on-line evaluation on micromachine system, 751
  predictive, design, for bilinear systems, 97

Decentralized reliable stabilization of linear time-invariant multivariable control systems by stable factorization approach, 1343
Delay systems approximation, 369
Describing functions, Volterra series, and analysis of non-linear systems in frequency domain, 871
Design
  predictive controller for bilinear systems, 97
  stabilizing control laws for smooth non-linear systems, 541
Discontinuous control component for robust sliding mode performance, 163
Discrete linear systems, model reduction via weighted impulse response gramians, 129
Discrete optimal control problems with control inequality constraints, sequential quadratic programming algorithm, 823
Discrete-time control of continuous-time non-linear systems, 113
Discrete-time linear dynamic system excited by non-gaussian inputs, identification using input–output cumulants, 1431
Discrete-time optimal control problems with long horizon, mixed coordination method, 1395
Discrete-time systems, linear and bilinear, Walsh function analysis, 847
Distributed control of power systems, interaction modelling approach, 1035
Distributed parameter system with non-minimum phase, H^∞-control, 45
Dither, generalized, 741

Eigenstructure assignment by output feedback, 1413
Eigenvector function, causal, approximations and problem of scaling, algorithm, 509

Feedback
adaptive gain type, modification of adaptive control laws, 145
collocated position type for vibration control, adaptive modal parameters identification, 597
dynamic, for simultaneous stabilization of single-input systems, 1497
quantitative, survey of theory, 255
Feedforward
disturbance measurement type, use in LQG self-tuners, 579
into local loops of plant modifying cascaded feedback systems, 1467
Frequency domain analysis of non-linear systems using describing functions and Volterra series, 871
Frequency-domain evaluation methods comparison for stability robustness, 463

Galerkin finite-element simulation model, 2D optimal pumping strategy for groundwater contamination, 889
Gramians
determination in closed form, for stable time-invariant linear system, 1483
weighted impulse response type, for model reduction of linear discrete systems, 129
Groundwater decontamination, optimal pumping strategy, 889
Guardian maps, maximal range for generalized stability, application to physically motivated examples, 837

H^∞-control of a distributed parameter system with non-minimum phase, 45
H^∞ identification of stable continuous time systems using generalized Laguerre series methods, 689

Identification
adaptive modal type, for collocated position feedback vibration control, 597
algorithms, recursive, for continuous systems using an adaptive procedure, 391
and optimization, hierarchical integrated approach, for on-line stochastic control of steady-state industrial processes, 1
of continuous-time systems for sampled data, bias-compensating least-squares method, 445
of linear process by modified spectral analysis method, 1449
of linear systems using input–output cumulants, 1431
of state-space model, with data correlation, 181
recursive least-squares type, in self-tuning control, practical use, 1021
Ill-conditioned plant, design and analysis, directionally uniform weightings, plant directionality coupling, multivariable loopshaping, 1261
Industrial processes, steady-state, on-line stochastic optimizing control, hierarchical integrated identification and optimization approach, 1
Input–output linearization method, hidden linear dynamics, 731

Laguerre methods and H^∞ identification of continuous-time systems, 689
Laurent expansion evaluation of polynomial matrix, 431
Linear discrete systems, model reduction via weighted impulse response gramians, 129
Linear dynamics hidden by input–output linearization, 731
Linear plants with bounded non-linear inputs, discrete, not-necessarily stable: stable adaptive control, 335
Linearization, input–output, adaptive, of non-linear systems, 193
Long-horizon discrete-time optimal control problems, mixed coordination method, 1395
Loop stability criterion, MIMO feedback systems having an uncertain plant, 527
Loop transfer recovery for general observer architectures, 1177
Loop transfer recovery problem, for non-minimum phase systems, recoverable target loops, and recovery in a subspace, 1067, 1117
LQG self-tuners, use of disturbance measurement feedforward, 579
LTR theory for non-minimum phase systems, recoverable target loops, and recovery in a subspace, 1067, 1117

Matrix, polynomial, inverse computation and Laurent expansion evaluation, 431
MIMO feedback systems
having uncertain non-linear plant, robust design, 1283
having uncertain plant, loop stability criterion, 527
MIMO systems, irreducible model estimation, 223
Model
boundary-value type, efficient smoothing, 503
internal, in regulation stabilization and tracking, 411
irreducible, estimation for MIMO systems, 223
state-space type, identification with data correlation, 181
stochastic, continuous-time, computation from ARMA models, 1311
Model order reduction via real Schur-form decomposition, 709
Model reduction of linear discrete systems via weighted impulse response gramians, 129
Modelling
equilibrium surface methodology, application to controller design for Van der Pol oscillator, 1055
interaction type, distributed control of power systems, 1035

MRAC
new design algorithm, 1327
robust to class of unmodelled dynamics and bounded output disturbances, 1359

Non-linear continuous-time systems, confinement and stabilization by state feedback, 799
Non-linear systems
adaptive input–output linearization, 193
analysis in frequency domain using describing functions and Volterra series, 871
continuous-time type, discrete-time control, 113
smooth, design of stabilizing control laws, 541
Non-minimum phase systems, recoverable target loops, and recovery in a subspace, LTR theory, 1067, 1117
Nyquist approach to robust stability of control systems with polytopical uncertainty, 967
Nyquist bands, generalized for structured and highly structured uncertainty, 1295

Observer architectures, general, loop transfer recovery, 1177
Optimal control, quadratic, linear, robust, for systems with linear uncertainties, 81
Orthogonal functions, use for checking controllability of linear systems, 1491

Partial-fraction expansion in system analysis, 619
PID controller, optimal, auto-tuning, on-line evaluation on micromachine system, 751
Polynomial equations, constant solutions, 495
Polynomial matrix, inverse computation and Laurent expansion evaluation, 431
Polynomial solution to the continuous-time GMV control problem, 641
Polynomials
with bounded coefficients, root regions, 929
with real parameter uncertainty, simple robust stability tests, 907
Power systems, distributed control, interaction modelling approach, 1035

Quadratic optimal control, mixed L_2 and L_∞ problems, 1161
Quadratic programming algorithm, sequential, for discrete optimal control problems with control inequality
Quadratic robust linear control for systems with linear uncertainties, 81
Quantitative feedback theory, survey, 255

Reconfigurable control systems, pseudo-inverse method stability, 717
Regulation, internal models, 411
Regulator, multirate, optimal, time invariant approach to design, 1233
Robot arms, multiple, handling common object, existence and structure of minimum-time control, 855
Robot dynamic model based on manipulator system performance, simplification using CAD, 1205
Robust adaptive control of plants with unknown order and high frequency gain, 559
Robust design of MIMO feedback systems having an uncertain non-linear plant, 1283
Robust linear quadratic optimal control for systems with linear uncertainties, 81
Robust MRAC for a class of plants with unmodelled dynamics and bounded output disturbances, 1359
Robust performance specifications for uncertain stable SISO systems, 1263
Robust sliding mode performance, discontinuous control component, 163
Robust stability of control systems with polytopical uncertainty, a Nyquist approach, 967
Root-locus method for linear systems with delay, simple pivoting algorithm, 951
Root regions of bounded coefficients polynomials, 929

Schur-form decomposition, real, for model order reduction, 709
Self-tuning control, recursive least-squares identification, 1021
Singularly perturbed systems, sliding-mode control, 985
Singular systems inner and outer geometry with computation of subspaces, 661
SISO continuous-time plant, polynomial solution of the GMV control problem, 641
SISO systems, uncertain
stable, robust performance specification, 1263
with fixed stable minimum-phase controllers, relationship of closed-loop systems to plant RHP poles and zeros, 771
Sliding-mode control for singularly perturbed systems, 985
Sliding-mode performance, robust, discontinuous control component, 163
Spectral analysis in linear process identification, 1449
Stability, generalized, maximal range, application to physically motivated examples, 837
Stability of the pseudo-inverse method for reconfigurable control systems, 717
Stability robustness, frequency-domain evaluation methods comparison, 463
Stabilization
decentralized, reliable, of linear time-invariant multivariable control systems by stable factorization approach, 1343
internal models, 411
Stabilizing control laws, design, for smooth non-linear systems, 541
Stable hybrid adaptive control, asymptotic properties, 1377
State feedback, confinement and stabilization for non-linear continuous-time systems, 799

State-space model identification with data correlation, 181
Stochastic optimizing on-line control of large-scale steady-state industrial processes, hierarchical integrated identification and optimization approach, 1
Systems analysis, partial-fraction expansion, 619

Tracking, internal models, 411
Transfer function matrix, minimal balanced realization using new algorithm, 1255
Transfer function zeros of a state space system, computation, 477

Uncertain SISO systems with fixed stable minimum-phase controllers: relationship of closed-loop systems to plant RHP poles and zeros, 771
Uncertainties, linear, in systems to be controlled optimally, quadratically, linearly and robustly, 81
Uncertainty, structured and highly structured, generalized Nyquist bands, 1295
Unknown order high-frequency gain plant, robust adaptive control, 559

Van der Pol oscillator, controller design using equilibrium surface modelling, 1055
Vibration control, by collocated position feedback, adaptive model parameters identification, 597
Volterra series, describing functions, and analysis of non-linear systems in frequency domain, 871

Walsh function analysis of linear and bilinear discrete time systems, 847
Wing flutter, with unmeasurable excitations and unmodelled dynamics, adaptive controller, 293
